UV-Sonnenschutz

Die Strahlung in Erdnähe ist ein unsichtbarer Teil des Sonnenlichts.

Die UVA-Strahlung verursacht keinen alarmierenden Schaden für die Haut und sorgt für Bräunung, aber die UVB-Strahlung führt zu Verbrennungen und ist Krebs erregend. Damit es nicht zu irreparablen Schäden auf der Haut kommt, sind intensiver Schutz und Präventivmaßnahmen erforderlich. Das Filtervermögen von Markisenstoffen hängt von Gewicht, Dicke und Farbe ab.

UV sun protection

Radiation reaching the Earth's surface is an invisible part of sunlight:

Although UVA rays do not cause any alarming damage to the skin and are responsible for tanning, UVB rays lead to sunburn and are a cause of skin cancer. To prevent irreparable damage to the skin, good screening and preventive precautions are required. The filtering capacity of awning fabrics depends on their weight, thickness and colour.

Alle unsere Markisenstoffe bieten einen UV-Schutz von mindestens 90 %. Daher ist es ein gutes Gefühl, geschützt unter einer Lewens-Markise den Sommer zu genießen. Den jeweiligen UV-Schutzwert können Sie den Angaben an den Stoffmustern entnehmen.

Mehr dazu auf Seite 29.

All our awning fabrics offer UV protection of at least 90 %. It feels good, therefore, to enjoy the summer while safely protected by a Lewens awning. You can find the respective UV value in the information with the fabric samples in our collection. – **More on this on page 29.**

Zertifiziert

Markisenstoffe aus Acryl oder Polyester,
ausschließlich hergestellt aus Öko-Tex zertifizierten Materialien

Das Öko-Tex-Zertifikat garantiert, dass unsere wasserabweisenden Acryl- und Polyester-Markisenstoffe ungiftig sind. Die zugrunde liegenden Laborversuche bestätigen, dass in den Geweben weder unangenehme Gerüche noch krebserregende oder flüchtige Stoffe oder Pestizide nachzuweisen sind. Die Markisenstoffe erfüllen die unter Punkt 15.2 „Textilien“ der Norm UNI EN 13561:2009 aufgeführten Anforderungen.

Certified

Awning fabrics made from acrylic or polyester,
manufactured exclusively from Oeko-Tex-certified materials

The Oeko-Tex certificate guarantees that our water-repellent acrylic and polyester awning fabrics are non-toxic. The laboratory tests on which it is based confirm that neither unpleasant odours nor carcinogenic or volatile substances or pesticides can be detected in the fabrics. The awning fabrics satisfy the requirements set out in Section 15.2, "Textiles", of the UNI EN 13561:2009 standard.

Volantformen [Valance styles]

1

2

3

4

Einige unserer Qualitätsmerkmale:

- Tuch und Volant werden aus einem Stück gefertigt (Rapportgleichheit)
- Säume oben, unten und Volantsaum versäubert (sauberer Abschluss)
- Rapportsymmetrischer Abschluss links und rechts
- Verwendung von Tenara®-Qualitätsnähgarn auch für Volants

Some of our quality features:

- Awning and valance are produced from one piece (identical repeat pattern)
- Seams on top and bottom and valance seam neatened (clean completion)
- Repeat-symmetrical completion left and right
- Use of Tenara® quality sewing yarn also for valances

Hinweise für Verbraucher

Wickelfalten (der sog. Wabeneffekt) und Knickfalten (die im Gegenlicht wie dunkle Streifen aussehen) sind trotz aller Sorgfalt in der Produktion, Ausrüstung und in der Konfektion technisch unvermeidbar. Näheres hierzu in der Broschüre „Richtlinie zur Beurteilung von konfektionierten Markisentüchern“, die der Industrieverband Technische Textilien – Rollladen – Sonnenschutz e.V. (ITRS), herausgegeben hat. Darin sind einige Merkmale bezüglich Wickel- und Knickfalten beschrieben. Diese sind kein Grund zur Beanstandung. Solche optischen Mängel ändern weder die technischen Eigenschaften unserer Markisenstoffe noch die Lebensdauer des Markisentuchs.

Wir empfehlen, das Markisentuch in trockenem Zustand aufzuwickeln.

Notes for users

Winding creases (so-called wrinkle effect) and folding creases (which look like dark stripes when viewed against the light) are technically unavoidable, despite all due care being taken during the production, finishing and assembly processes. More information on this topic can be found in the brochure "Richtlinie zur Beurteilung von konfektionierten Markisentüchern" published by the German industry association Industrieverband Technische Textilien – Rollladen – Sonnenschutz e.V. (ITRS). This describes some of the features of winding and folding creases. These do not constitute any grounds for complaint. Such visual defects do not affect either the technical properties of our awning fabrics or the service life of the awning.

We recommend retraction of the awning in a dry condition.

UPF-Wert

Der Schutzfaktor unserer Markisenstoffe wird mit dem international für Sonnenschutztextilien anerkannten **UPF-Wert** (Ultraviolet Protection Factor) angegeben (Berechnung nach AS/NZS 4399:1996). Alle unsere Markisenstoffe bieten einen UV-Schutz von mindestens 90 %.

Der UPF-Wert gibt an wie viel UV-Sonneneinstrahlung vom Gewebe absorbiert wird (UVA und UVB):

[The UPF value indicates how much UV solar radiation is absorbed by the fabric – UVA and UVB:]

 **UPF 15 - 24** guter UV-Schutz: 93,3 % - 95,9 % Absorption
[good UV protection: 93.3 % - 95.9 % absorption]

 **UPF 25 - 39** sehr guter UV-Schutz: 96,0 % - 97,4 % Absorption
[very good UV protection: 96.0 % - 97.4 % absorption]

 **UPF 40 - 50, 50+** hervorragender UV-Schutz: > 97,5 % Absorption
[excellent UV protection: > 97.5 % absorption]

Beispiel:

Der UPF-Wert 30 bedeutet, dass 29/30 der Strahlen abgeblockt bzw. absorbiert werden und nur 1/30 der UV-Strahlung durch das Gewebe dringt. Das Gewebe bietet somit einen Schutz von 97 %.

UPF value

The protection factor of our awning fabrics is indicated by the **UPF value** (Ultraviolet Protection Factor) that is recognised internationally for sun protective textiles (as calculated in conformity with AS/NZS 4399:1996). All our awning fabrics offer UV protection of at least 90 %.

The UPF value indicates how much UV solar radiation is absorbed by the fabric (UVA and UVB).

Example:

The UPF value 30 means that 29/30 rays are blocked out or absorbed and only 1/30 of the UV radiation penetrates the fabric. The fabric thus offers a protection level of 97 %.
